Unifi on Mac OSX 10.5 & 10.6 Guide

Step one
Click on the ‘Airport’ located in the menu bar at the top right hand of the screen. Select Unifi from the drop-down list of wireless networks.

Step two
When requested, enter your UWA Staff or Student Number as the User Name, and your associated Pheme password as the password.

Step three
You should be prompted to verify the certificate. Click on Show Certificate.

Step four
Click on the arrow next to ‘Trust’.

NOTE: Ensure the ‘802.1X’ field is set to ‘Automatic’ and that ‘Remember this network’ is selected, as this will ensure that you will not be required to complete this setup process during subsequent connection attempts.

More information: www.unifi.uwa.edu.au
Step five
Ensure all the settings listed here are set to ‘Always Trust’.

NOTE: You may be prompted to enter your Macbook’s password in order to confirm the change to the trust settings. This is the password for your computer, NOT your Pheme password.

You are done!
After a few seconds you should be notified that the connection was established successfully. You now have Internet access.

Doesn’t work?
Try the following tips:

- Double-check your student number and Pheme password are correct and have not expired.
- Move around to ensure you are in a location with good wireless reception.

Still doesn’t work? Help is available!
Contact the University Library:

In person: At the information desk in your subject library
