Unifi on Mac OSX 10.7 & 10.8 Guide

Step one
Open the Wi-Fi menu. This is located in the upper right corner of the screen.

Step two
Expand the ‘Network Name’ drop down menu box, and select Unifi from the list of wireless networks available.

Step three
You will be prompted to input your Username and Password.

NOTE: The Username is your 8 digit student/staff number and the Password is your associated Pheme password.

Leave ‘Mode’ set to Automatic and select ‘Join’ when you are ready to continue.

Step four
You may be prompted to Verify the Certificate when authenticating to the Unifi network.

NOTE: These instructions describe connecting your Macbook to Unifi for the first time. If you have connected before, you may not have to complete this step.

Please select ‘Show Certificate’.

NOTE: If you see no wireless networks, either the “Wi-Fi” has not been switched on, or you are not within range of a Unifi access point.

More information: www.unifi.uwa.edu.au
Step five
In the lower pane of this window, expand the ‘Trust’ section by selecting the arrow next to it.

Ensure all the Trust settings are set to ‘Always Trust’, as shown below.

Press ‘Continue’ when you are ready to proceed.

NOTE: You may be prompted to authenticate this step, by entering the Macbook’s administrator password.

You are done!
After a few moments, the Wi-Fi will report that it is Connected, denoted with a green light.

Doesn’t work?
Help is available! But before coming for help, please try the following:

- Double-check your student number and Pheme password are correct and have not expired.
- Move around to ensure you are in a location with good wireless reception.
- Ensure that you have the latest drivers installed for your wireless network card.

If it still doesn’t work, contact the University Library.

In person: At an inquiry desk in one of the UWA subject libraries
